FOLUTION 2.0

THE NEW NORM

HeLIUM

E-BIKE MEETS ECO-BIKE

With the Evolution 2.0 HeLIUM series, NOX was the first manufacturer to take the path of lightweight, full-suspension e-MTBs – an electric mountain bike range aimed above all at sportily-minded customers, which still conveys the natural, dynamic riding sensation of an unmotorised bicycle. The HeLIUM's unique, slender design and light weight enable trail adventures previously only conceivable with a non-motorised mountain bike. Coupled with the serious benefit of motor assistance, the NOX HeLIUM provides the ideal package for sporty e-bikers or eco-bikers who want to follow their own trail.

LIGHT

INTERACTIVE

Both the Helium and the Metropolis series are equipped with the evation drive from Fazua.

Metropolis

E-MOUNTAIN MEETS E-CITY

Despite a total commitment to e-MTBs and their use in the challenging alpine environment, NOX still has long-established and active roots in the city of Berlin. Inspired by both worlds, NOX is now presenting an unrivalled feast for the eyes for urban areas in the era of micromobility and individuality. An e-bike for which you'll no longer need basement or garage storage space, because you'll want to use it to decorate your living room. An e-bike for which you'll leave any car parked at home, because it will take you reliably from A to B, Monday to Friday, without any traffic jams. An e-bike that nevertheless never shies away from adventures and is always ready for a spin off the beaten track – yes, it even compels you to do so, because no journey is ever over at the end of the road on a NOX bike.

In addition to a uniquely natural riding sensation with no unnatural pedal resistance, the FAZUA drive system also integrates elegantly and inconspicuously into the frame – with previously unparalleled flexibility: In a matter of seconds, you can use the down-tube cover to convert your e-bike into a normal bike and enjoy unlimited freedom WITHOUT A MOTOR AS WELL.

THE FUTURE IS NOW. THE E-VOLUTION HAS BEGUN

MODERN
UNIQUE
INNOVATIVE
VERSATILE
MINIMALISTIC
FUNCTIONAL

THE LIGHTEST AND MOST COMPACT DRIVE SYSTEM IN ITS CLASS

In the form of the evation drive, German motor manufacturer Fazua supplies an electric drive system aimed above all at sportily-minded bikers, which still conveys the natural riding sensation of an unmotorised bicycle. An innovative approach that coincides perfectly with the vision and passion of NOX: to continuously rethink electric mountain bikes and raise them to a new level.

DESIGN

Thanks to its innovative design and underlying technology, the drive system can be integrated elegantly into the down tube, so the bike does not look like an e-bike at all at first glance.

ASSISTANCE

The drive system adapts itself entirely to its rider thanks to torque measurement on both sides and cadence measurement in the bottom bracket. If you ride sportily and apply plenty of power to the cranks, you'll also be correspondingly well supported.

PEDAL RESISTANCE

The motor cuts out automatically at over 25 km/h. The integrated freewheel is designed so you can achieve top speeds by yourself, without any unnatural pedal resistance. The system can also be deactivated completely at the push of a button, allowing the bike to be used conventionally without any pedal resistance.

EVATION MOTOR SOFTWARE 2.0

- The "Black Pepper" performance update has significantly improved the evation Motor Software in all areas.
- Complete individuality, an even more natural-feeling ride and even better performance. All supplied by the "Black Pepper" performance update.

WEIGHT

Weighing in at only 4.6 kg, the evation is the lightest and most compact drive system in its class. The riding pleasure and dynamics of a bike without a motor are preserved thanks to the low overall system weight.

2 IN 1

The drive unit and battery can be removed together in one simple operation and then replaced with the downtube cover available as an option. This allows you to convert your e-bike into a normal bike in a matter of seconds. You can also use the hollow area as a practical stowage space for repair kit, tools and provisions.

REPLACEABLE BATTERY

The battery has deliberately been kept small and light: For particularly long rides, you can simply pack a spare battery (1.38kg) that supplies you with a whole 252 Wh of extra power in the size of a half-litre water bottle.

DATA

Nowadays, most sportily-minded cyclists collect and analyse their data. The Fazua app is compatible with all e-bikes equipped with the Fazua evation drive system and supplies you with immediate access to much more data, so you can find out more about your training and vour bike.

- GPS navigation and positioning
- Tachometer
- Technical overview, battery level
- Support, direct access to Fazua Service
- Share rides with friends
- Summary and detailed analysis of the collected ride data

available in

Enduro **7.1** 29" / 27,5"+ | 180mm

All Mtn **5.9** 29" / 27,5"+ | 150/160mm

PRO

The PRO model range makes a premium yet mysterious impression. Designed for continuous operation in the toughest conditions, the emphasis here is on performance and weight-optimisation. Alongside a carbon frame, the models are equipped uncompromisingly with premium components and many other highlights for a top-class cycling experience.

CONNECTIVITY

You can connect to your bike at any time by app to collect and analyse data and, with that, find out more about your training and your bike.

OPERATING UNIT

The simple and intuitive Remote b operating unit on the handlebar offers maximum control thanks to the indication of battery charge level and system status with LEDs.

NOILDE

SHORT- AND LONG-HAUL

If you plan to go on longer tours, you can extend your range at will at any time using one or more light & compact replaceable batteries.

BATTERY 252Wh, 36V, 1.36kg

FLEXIBILITY

In a matter of seconds, you can convert your e-bike into a normal bike. Simply remove the drive unit and battery and replace them with the down-tube cover done!

WEIGHTLESS

Exceptionally low overall weight thanks to a carbon frame, the evation drive system and high-quality components (approx. 17.9Kg, depending on size and equipment)

EQUIPMENT OPTIMISED FOR E-BIKES

Uncompromising equipment to meet the demands made of e-bikes in challenging terrain

FLEXIBLE TYRE SELECTION

Tyre width up to 2.8" (for 27.5") with **Boost Standard** Wheel size 27.5" / 29" per flip chip

INTEGRATED AND ELEGANT

A new dimension in e-bike aesthetics based on innovative technology and a slender frame geometry coupled with the unmistakable NOX design language.

The riding pleasure and dynamics of a bike without a motor are preserved thanks to a modern geometry (long wheelbase, flat steering angle, short chain stays) and low overall system weight.

THE NEW TAKE 2 E-RIDE 1.

ASSISTANCE PRECISELY WHERE YOU NEED IT.

Do you commute to work on an e-bike during the week, but also want to take the bike into the mountains at the weekend, because you need to recharge your batteries as well?

And you don't want to buy two e-bikes? Be it on principle, for sustainability reasons or due to the cost? NOX offers you the one and only solution to date with the "TAKE 2 E-RIDE 1" bundle. Select a HeLIUM AND a MeTROPOLIS bike of your choice! With one and the same Fazua drive system, you have assistance at a click, precisely where and when you need it. Be it on the e-MTB or e-city bike.

THE ICING ON THE CAKE:

The 2-in-1 system does not mean that your bike without a motor needs to stand around idly. With the supplied down-tube cover, both bikes can always be ridden without motor assistance, just like a normal bike. So if your loved one commutes to work with the e-bike, you can still go shopping for the evening or go for active lap of the home trail with the other bike.

Furthermore, if you already own an e-bike equipped with a Fazua drive system, but made by another bicycle manufacturer, you can also buy a NOX e-bike without a motor. With the EVOLUTION 2.0, NOX therefore offers an open system with maximum flexibility.
